(a)

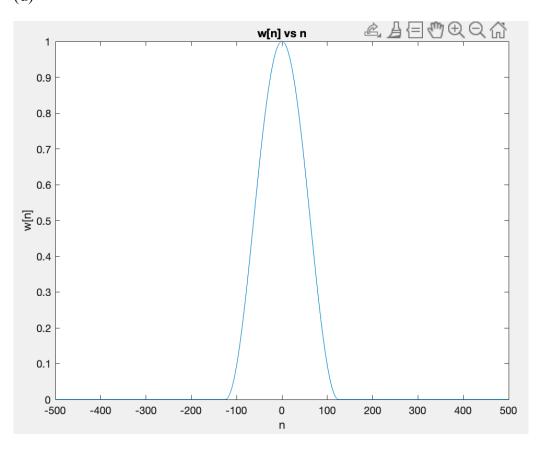

(b) 在兩邊的頂點可以發現有劇烈的震盪(ripple),此現象即為Gibbs phenomenon,造成此現象的原因是由於在time domain上我們沒辦法compute無限項的signal,所以只能進行有限項的fourier transform。

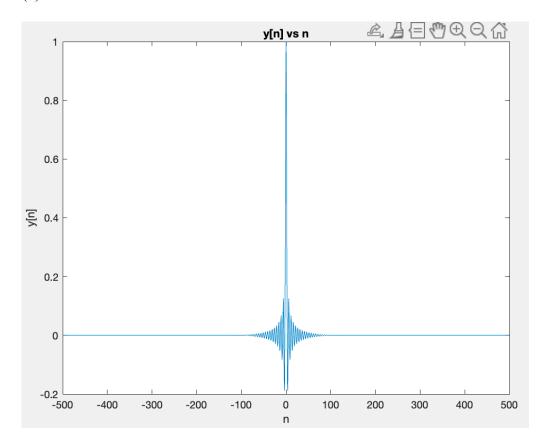

## (c) the answer is the same with (b)

(d)

(f) 和(b)小題相比,兩邊頂點的Gibbs phenomenon明顯消除很多,這是由於加上了 Hanning window function,它可以消除高頻的干擾,只針對有限長度的信號做處理。
